Product Brochures

A concise guide to ASEW testing equipment families and the information to request when selecting a product.

ASSOCIATED SCIENTIFIC & ENGINEERING WORKS

Concrete Testing Equipment

Equipment used in the assessment of concrete materials and specimens.

- Common requirements: intended test, sample dimensions, load range and laboratory environment.
- Ask for the relevant model brochure, operating method and accessory list.

Soil Testing Equipment

Equipment supporting geotechnical investigation and laboratory soil testing.

- Specify the test method, sample type, required capacity and applicable standard.
- Request product-specific details for fixtures, sample preparation and reporting.

Cement & Aggregate Testing

Instruments used for testing constituent materials in construction.

- Identify the material, test objective, sample preparation needs and throughput.
- Confirm compatible accessories and method-specific configurations.

Bitumen & Road Material Testing

Testing solutions for bituminous materials and road-construction applications.

- Share the intended test and temperature-control requirements.
- Ask ASEW to confirm the suitable model and supporting equipment.

Laboratory Solutions

Selection and planning support for testing laboratories.

- Prepare a list of required tests, available space, utilities and installation conditions.
- Request an itemized proposal with installation and support details.

DOCUMENT NOTE

This brochure is an informational draft based on broad equipment categories. The shared catalogue attachment contained an Acrobat link rather than readable catalogue pages. No model numbers, certified standards, prices or performance specifications have been verified against ASEW source documents. Confirm details with ASEW before publishing as an official product brochure.
